

Fatec

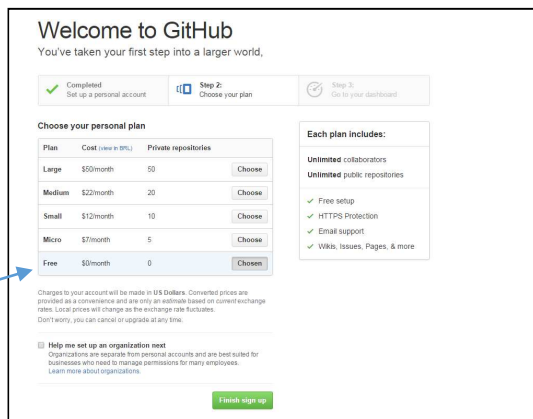

Disciplina – Teste de Software - Hospedando o repositório no GitHub

Prof. Edson Saraiva de Almeida

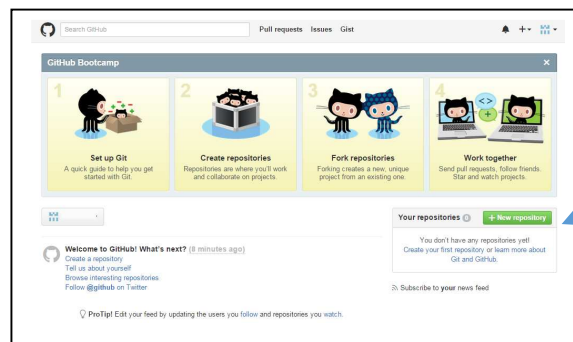

1) Criando o usuário no GitHub

2) Página de boas-vindas e escolha do plano de contratação – escolha o plano que mais se adequa as necessidades finalize o cadastro clicando no botão “Finish sign up”.

3) Ao clicar no botão “Finish sign up” será apresentada a tela Dashboard. O GitHub enviará um e-mail de confirmação do cadastro

4) Criar o repositório do projeto clicar no botão “New repository”. Definir o nome do repositório, por exemplo “RepositorioFatec” em seguida “Create Repository”.

Owner	Repository name
<input type="text"/>	<input type="text"/>
Great repository names are short and memorable. Need inspiration? How about verdant-wool.	
Description (optional)	
<input type="text"/>	
<input type="radio"/> Public Anyone can see this repository. You choose who can commit.	
<input type="radio"/> Private You choose who can see and commit to this repository.	
<input type="checkbox"/> Initialize this repository with a README This will let you immediately clone the repository to your computer. Skip this step if you're importing an existing repository.	
Add .gitignore: <input type="text"/>	Add a license: <input type="text"/>
<input type="button" value="Create repository"/>
